Some modifications or improvements of the 2018/01 version
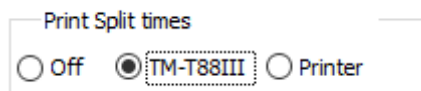

1) the current way to start the program was to launch the file **HELGA9.mdb** where the value « 9 » refers to a version of Access.

   With this update the program to start is renamed **HELGA.mdb** which uses the database **Helgadat.mdb**.
   After installation of this latest update, you have in your directory a (old) file HELGA9.mdb and a (new) file HELGA.mdb – You may delete the old file Helga9.mdb and eventually update your shortcut to HELGA.mdb.

2) a significant improvement concerns the "ticket printer" for the results upon arrival of each runner and his punching at the PC

   a) previous situation : the ticket was assigned to a specific printer for which the name "Epson TM-T88III receipt" was mandatory. Each installed ticket printer had to be renamed with this specific name, whatever its brand or type.

   b) new concept : the printer to be used must now to be chosen among the installed printers, according their brand or type.

   Accept the "by default name" of your printer during its installation and select it in the drop down list.

   If you had previously renamed your printer to "Epson TM-T88III Receipt" to be usable with Helga, you may write back to its "by default name", if you wish.
